Parts of the Leaf

The flat part of a plant that grows from the stem. It is usually green, has veins, and can vary in the shape of its blade and margins.

This is the narrow, hard part of the leaf that joins the blade to the stem.

Tiny leaflets at the base of the petiole which may be joined or separate.

The thin, flat, broad, part of the leaf.

Both the circulatory and skeletal system of the leaf.

The outside edge or rim of the leaf.

The lower rim of the leaf, which connects to the petiole.

The tip or point of the leaf.
